

Sulfite Drop Count Test Kit

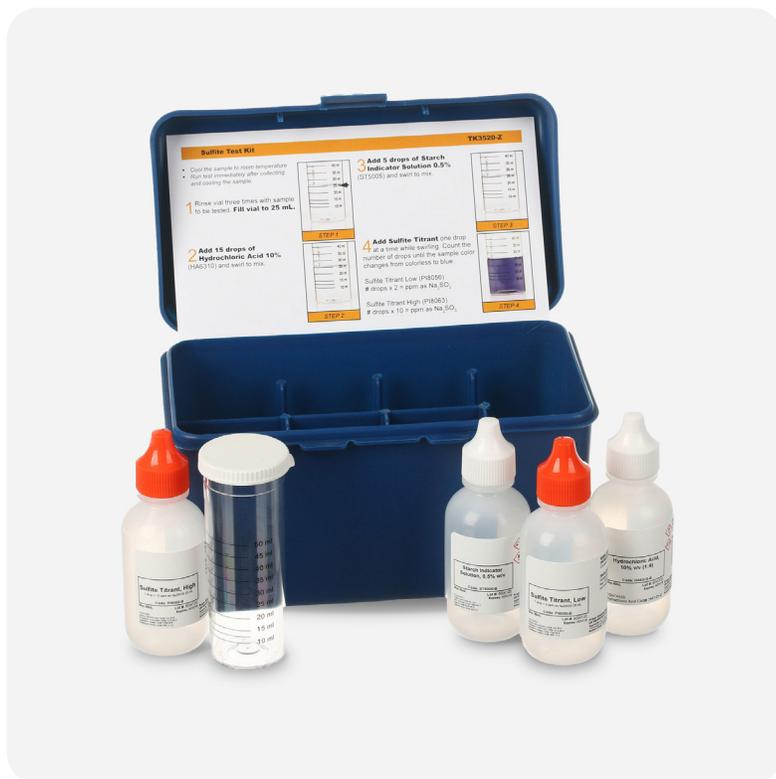

1 Drop = 2 or 10ppm Na_2SO_3 / 25mL

Product Description

Sulfites are used to remove dissolved oxygen from the treatment water. Excess sulfite at elevated temperature combines with oxygen to reduce pitting. Remember to cool your samples and perform the test immediately. Each kit is packaged in a durable plastic case with instructions and includes all items to complete approximately 60-75 tests.

Kit Components

- Sulfite Titrant High, 60mL
- Sulfite Titrant Low, 60mL
- Hydrochloric Acid 10%, 60mL
- Starch Indicator 0.5%, 60mL
- Vial, Plastic, 10-50mL

EndPoint ID® Test Kit Features:

Color Coded Caps

The color caps on reagents match the color bar on each test kit instruction giving you a quick, visual reference to make sure you use the proper reagents with your kit.

Photographic Instructions

Every EndPoint ID® procedure comes with photographs to demonstrate the color changes that occur during tests. It doesn't get any easier!

Training Videos

Many of the EndPoint ID® Test Kits feature QR codes. These codes can be quickly scanned with any smart phone and instantly link you to instructional videos. This feature is perfect for training new users.

Quick Reference Icons for Safety and Testing Tips

EndPoint ID® Test Kits feature quick reference icons to remind users of key safety and testing tips. It also includes possible interferences and reagent expiration dates to ensure using fresh product when testing.
